

# Marine and Coastal Ecology Concurrent Session

## Breakout Questions:

1. What are your reactions to the characterization and prioritization of the impacts to coastal and ocean ecosystems in Dr. Diaz's presentation? Do you have anything to add?
2. What are some short to medium term actions that could be taken to address these priority impacts, despite uncertainty?
  - Do any of these actions also help reduce existing stressors to marine and coastal ecosystems (e.g. habitat loss, sedimentation, excessive nutrient loading, etc)?
3. What are some of the key opportunities, challenges and information needs with moving forward? (e.g. data, education, planning, etc)
